GLAD PRICE LIST

Wholesale and Retail—Superseding All Former Catalogs

Bailey, R. G.

111

The picture on this page is of a 1927 seedling, planted in 1923 as a bulb less than one-fourth of an inch in diameter. It is of a lavender-blue color, large open florets, well placed and is almost self color.

The flower as pictured on this page is a cross between Heavenly Blue and Mrs. Van Konynenburg, both imported by us direct from Holland. Glad growers who saw the bloom say it is superior to either of the parents.

750,000 GOOD
GLADS
to select from

DELPHINIUMS
TULIPS
and other
PERENNIALS

GLADIOLUS SEEDLINGS

Creating new varieties of Gladiolus is all the rage now. To get results good varieties are selected, hand pollenized, and the seeds planted the following year. These seeds make small bulbs the first year and in some instances will bloom from seeds. The second year most of the bulbs bloom. None of them will be the same color nor the same shape. This is the way new varieties of Gladiolus are secured. Planting the bulbs or the bulblets from a bulb one gets plants just like the mother plant. This creating of new varieties, with the possibility always before one of getting a top notcher is the most fascinating part of Glad growing. We grow thousands of seeds annually and have many promising new varieties under observation in our gardens.

This year we have a few extra seeds for sale. They are from the best plants in our possession and all hand pollenized. The seeds are put up in lots of 100 at a price of \$1.00 per package.

DELPHINIUM SEEDS

We have growing in our garden many hundreds of Delphiniums, selected from thousands of seedlings obtained from seeds bought from the best growers in America. From the best of these we have saved seeds for our own use. And in addition have 40 packages of seeds for sale at \$1 00 per package, postpaid. In color these delphiniums have a range from almost white to deep blue-black. They are tall and short, single and branching, large and small florets, some of which are single, double and triple petaled, some like a beautiful full-centered rosette. The plants from which these seeds were taken are extremely hardy, and in most parts of the United States will bloom both early in the spring and late in the fall. Delphiniums are one of the most satisfactory plants grown and constitute a flower garden within themselves.

DISCOUNTS—On all orders sent us before Feb. 15 we allow a discount of 10 per cent; those before March 15 a discount of 5 per cent. On orders amounting to \$10 you may deduct an extra 5 per cent; on orders of \$25 deduct 10 per cent. We also allow an added discount of 5 per cent to all A. G. S. members. Give your 1929 membership number.

OUR SPECIAL ASSORTMENT

This year we have made up three lots of Glads which we want to especially recommend. Every bulb in these collections is of good variety. Many of them of the higher priced bulbs listed in this catalog, which for some reason have become mixed, the label lost or some other like cause makes them unavailable for the named retail trade.

LOT 1—In this lot there are 50 small bulbs, all blooming size, of assorted colors, priced at \$1.00.

LOT 2—This also contains 50 small bulbs of blooming size, taken from our regular retail bins. Good assortment of colors, \$1.50.

LOT 3—This lot contains 50 small bulbs of blooming size, of assorted varieties, each variety tagged and wrapped separately. \$2.00.

NEW HOLLAND CREATIONS

We have imported three of the new varieties and now have the increase for sale, in three sizes. All three are exceptionally outstanding.

PFITZER'S TRIUMPH—Bright salmon orange, with flowers of enormous size. Large size, \$1.50; medium, \$1.00; small, 75 cents.

HEAVENLY BLUE—Of a tender lilac heliotrope blue color, a most wonderful flower. \$8.00 for large and \$6.00 for medium size; \$4.50 for small.

MRS. VAN KONYNENBURG—A light blue, said to be the very best of its color. In three sizes, priced at \$2.00, \$1.25, 75 cents.

GERALDINE FARRAR—We want to especially call attention to this Glad. It is very much like the new Holland sensation "Heavenly Blue," only slightly darker. It is of a pale lavender or blue color, such as all growers are striving to produce. As grown by us, it is the outstanding Glad in its color of American creation.

We have small quantities of many of the newer varieties which we do not list. If there is any Gladiolus which you desire but do not see listed, write us about it. It may be among our unlisted varieties. Like other Glad bugs, we are growing thousands of seedlings and hope some day to startle the flower world with introductions to make one sit up and take notice.

TIGER LILY (*Tigrinum Splendens*)—Very hardy lily, orange, spotted purple. The most gorgeous and satisfactory of all the hardy lilies. Each with any \$1.00 order, 25c. Five for \$1.00.

We are members of the American Gladiolus Society and would recommend to all Gladiolus growers that they become affiliated with this organization. Its monthly bulletin is alone worth the membership fee.

SPECIALS

At the end of the season we are certain to have more of many varieties left than we will plant. From these we will make up special lots and price them at \$2.50, \$3.50 and \$5.00. Nothing will be put in these lots but good Glads, and they will be priced at less than half their regular value. The selections, of course, will be by us. We can, however, eliminate any colors which you do not like. If you want to reserve one of these extra special last minute bargains, send your money now and the shipment will go forward after April 1.

THE WAY TO GROW GOOD GLADS

METHOD ADOPTED BY THE A. G. S.

CARE OF THE NEW BULBS. When bulbs arrive, open package at once to admit air. If not wanted to plant soon, store in cool, dry place. A canned fruit cellar is just right.

WHEN TO PLANT. When the trees native to your vicinity are unfolding their leaves. Then all dangers of damaging frosts are past. From then until last of June.

WHERE TO PLANT. In beds, rows, borders, etc., and among other light rooted plants. Plant in open sunny places not too near buildings nor close to foundations. Buildings shade and retard development or reflect strong sunlight and burn. Lack of free drainage, sunshine and aeration as well as ingredients in mortar make unfertile and sour soils. Keep away from trees and heavy rooted shrubs especially.

KIND OF SOIL. A sandy-loam is best. Works freely, retains moisture, and is productive. Any good garden soil will do but some require more work to keep loose, to keep weeds down, etc.

HOW TO PLANT. Manure well in the fall. In spring at planting time, use only well rotted manures or commercial fertilizers. If manures are not available, use leaves sprinkled with sheep fertilizers and some lime. Cow or hog better than chicken or horse manures. Will not burn if used heavy, and better chemical element content for flowers. Spade not less than 8 or 10 inches deep. Pulverize manures and soil thoroughly. Open rows or trenches 6 inches deep, 18 or 20 inches apart. Set large bulbs in trenches the width of the bulbs apart. Farther apart if you care to but not closer. Smaller bulbs not so deep. 6 inches is deep planting. Slows appearance of sprout through ground but protects from late frosts, will stand heavy winds, and extreme hot or rainy weather better. Cover bulbs with an inch of soil then sprinkle liberally with sheep fertilizer, bone meal, or complete slaughter house tankage. Fill in rest of trench with soil and firm down by walking on rows or with lawn roller to eliminate air pockets around bulbs. If soil is dry when planted, water thoroughly after planting. If planted in beds set bulbs about 6 inches apart.

HOW TO MARK. Put in stakes and label each variety as planted. Stakes in deep to avoid being pulled out in cultivating. Unless water-proof ink, use lead pencil for marking labels. Common ink will fade from rains and watering.

CULTIVATING. Keep soil loose and free from weeds always. Never permit caking or crusting of soil after rains or watering. Keep cultivating. The more you do, the better your plants and flowers for many reasons.

FERTILIZING. Use plenty of sheep fertilizer, tankage or bone meal. All or each. Each has some content the others lack. Bone meal good but slow. If nitrates and ammonia are used, be careful. Use them only between rows and never permit on plants. They are strong and stimulants more than foods.

WATERING. Water when necessary, then soak them. Sprinkling has tendency to draw roots up for moisture. Send the water down to the roots. Unless very dry, once a week is usually enough.

BLOOMS. Cut flower spike when first bud is open. Keep spikes in water. Change water and cut end of spike off slanting, daily. Use a knife for all cutting. Shears crush and close channels in stem so water cannot pass through to buds. In cutting spike, leave 4 to 6 leaves on plant to mature bulbs.

DIGGING. Dig when foliage turns brown but always before freezing weather. Cutting off foliage close to bulb. Dry in open air a few days but keep from frost. Store for a few weeks, then divide new bulbs and bulblets from mother bulb and old roots. Always keep label and name with each variety. Clean up and store for winter.

STORAGE. Store in cigar or other shallow wooden boxes. Paste label on box and mark variety plainly. Do not crowd because of danger of mixing varieties. Store in cool, dry place. A temperature of about 40 degrees F. A canned fruit cellar is exactly right if not too damp.

REMEMBER. Good bulbs, plenty of sun, food, water and cultivating is all you need to raise prize winning glads.

IMPORTANT. Buy your bulbs from us. We are members of the A. G. S. You are therefore assured of the best bulbs grown.

OUR HOME IN LEWISTON ORCHARDS

Lewiston Orchards, where our bulbs are grown, have an altitude of 1500 feet. It is a heavy, clayish, volcanic ash soil. The bulbs are raised in virgin soil and are free from disease. It is farther north than the northernmost part of Maine. This makes for hardy bulbs, and they will bloom profusely any place where there are 90 consecutive nights without freezing temperatures. In warm sections, by actual tests, these bulbs are exceptionally quick to come into bloom and make flowers of large size and brilliancy.

We have been growing flowers in Lewiston for 23 years, and at times have fifty thousand or more blossoms to greet the eye.

As to our reliability, by special permission we refer you to the Lewiston National Bank. Also to Dun's and Bradstreets.

Cash must accompany all orders under \$2.00. Over this amount 25 per cent of the amount must accompany the order. The balance to be paid before shipment is made. Bulbs may be shipped at any time the customer wishes. But we will not hold orders after April 1 unless fully paid in advance.

No orders for bulbs will be accepted for less than \$1.00, and none of the special assortments will be divided or mixed.

All bulbs or plants listed in this catalog are prepaid to any point in the United States.

We can supply about 50 varieties of Chrysanthemums, three distinct strains of Delphiniums, besides dozens of other perennial plants and shrubs. These are grown for our own pleasure and only the increase is sold.

GUARANTEE—Every bulb or plant sent out by us is absolutely guaranteed. If it is not as represented, write us and we will make an adjustment. **But we do not guarantee results in growing.** This is beyond our control.

All orders or inquiries should be addressed to
